

Breakthrough Non-Surgical Regenerative Therapies Are Now Available

Leading edge physicians are now offering RICHGEN, an alternate proven therapy, to help patients resolve or minimize most symptoms associated with arthritis and joint degeneration or to enhance their wellness and longevity – without surgery. With a treatment that takes only minutes to administer, the patient begins regenerating health.

What is Regenerative Medicine?

Regenerative Medicine is based in medicinal signaling cellular biologics from natural materials. RICHGEN is the most advanced signaling allograft composed of four ethically derived and donated post-birth tissue from highly screened donors. There are no red blood cells in the allograft and genetic materials from the donor are not transferred. RICHGEN is the most highly respected brand for its quality and it has been used successfully by over 100,000 patients.

What are the benefits of using RICHGEN Regenerative Therapy?

RICHGEN combination allograft signals the body to begin the process of replacing, engineering or regenerating cells, tissue, telomeres, organs, ligaments, muscles, cartilage and bones to restore or establish normal function. In addition, RICHGEN can be used to treat a variety of disorders. It dramatically reduces pain, inflammation and arthritis and promotes healing for wounds and immune deficiencies. The RICHGEN undifferentiated pluripotent extra cellular matrix signals restoration wherever administered into the body and additionally stimulates the body to heal itself naturally. It is an effective treatment for people suffering from musculoskeletal conditions, joint pain, damaged ligaments and tendons, degenerative disc disease and osteoarthritis. Intended for homologous use only.

How safe is Regenerative Medicine?

The product is prepared to the quality standards of FDA 21CFR part 1271/PHS 361 and the American Association of Tissue Banks (AATB), cGMP, GMP and GTP. Periodic inspections are made and the safety regulations are strictly adhered to.

TESTIMONIALS

Arthritis and Neuropathy Improved with RICHGEN – B.B. (75-year old male)

“My purpose for electing to receive a RICHGEN cellular treatment was to help restore my immune system from the degradation from rheumatoid arthritis and the negative effects of receiving treatment with Orencia. I was experiencing fatigue, depression, diminished libido, hair loss and weakened immune function. After having a tooth pulled my gum got infected and wouldn't fully heal even after two rounds of antibiotics. A burn on my arm wouldn't heal and became infected. My diverticulitis began to flare up with 4-6 bouts of diarrhea per day. My feet developed a neuropathy that became too numb and painful to wear regular shoes. I found it difficult to walk upstairs. My fingers were clenched unable to open and grasp objects. Within 4 hours of receiving the RICHGEN treatment my burn began to heal and within days my gums healed, my neuropathy and diverticulitis greatly improved and the pain and swelling in my hands significantly reduced so I could open them. I feel better than I have in years and I am so grateful for electing to receive the RICHGEN treatment and for getting my life back.”

Spinal Injections with RICHGEN – Christine Élan (65-year old female)

“The procedure was very simple. The nurse cleans the area and drapes around the spine. The Doctor is aware of the deterioration from the x-ray and his equipment review. He proceeded to inject lidocaine with a spinal needle. Then the Dr. added 1 ml of RICHGEN with 4 ml of saline for the L4 injection and the same for the L5 injection. Done. I was sore in my lower back for about 8 hours. Not bad. I actually was driving 6 hours later just fine. Three days later my back felt loose, light and free as if it was born again. I can tell something has changed, as I am no longer sensing my lower back and just going about my day. I highly recommend RICHGEN, as when I researched this product has everything in it so I wanted to use the best to get the best long lasting results.”

Asthma – Respiratory Responsive to RICHGEN – Gustavo Merdad (40-year old male)

“Living in a dense smog city I have had a hard time breathing with a tremendous amount of lung build-up. It was becoming very serious. I was able to see my physician and the consultation was given with an option for regenerative medicine. Later I came back for the treatment and within three days I was feeling better and in six days the phlegm in my lungs completely disappeared! The results are more than I expected in one treatment. I will get another one just to make sure I have resolved all the symptoms or just for my wellbeing.”

Knees and Spine Pain Free with RICHGEN – Anne D. (87-year old female)

Patient background: 87-year old patient was living in knee and spine pain for decades and walking with a cane. The arthritis was so thick in the knees that it was difficult to perform the injections. She was able to walk pain free immediately after the treatment to her spine and knees. “Mom is doing so much better than we dreamed! I spoke with her 10 days post treatment and she said that other than some morning stiffness she is PAIN FREE! This is after decades of pain and should have had knee replacement 12 years ago when she had the other knee done which was equally bad. After being afraid that her advanced age would minimize the effects, she is thrilled and no longer letting life pass her by.”

Hip Pain Resolved Using RICHGEN – J. Smith (50-year old male)

“I have always been an avid golfer but over the last several years it had become very difficult to play as I would experience a constant shooting pain in my hip area. It was no longer fun to play a game that I loved. I spoke with my Dr. and we decided to try RICHGEN. The entire procedure lasted less than 20 minutes and I experienced some soreness, from the injection, for about a day. Three days following the procedure I decided to put it to the test and I played three consecutive days pain free. My friends and family can't believe the difference and I look forward to getting my life back.”

Elbow, Shoulder, Hip and Pelvis RICHGEN Regeneration

– M. L. (49-year old female)

“I was involved in a severe accident incurring multiple fractures that required extensive surgeries with plates and pins. I could not function well and felt that I would never recover. I couldn't walk well due to swelling around the hip and pelvis and couldn't carry my grandchild due to limited function of my elbow and shoulder. Six months after the accident I received a RICHGEN cellular treatment. I noticed a change the first day after my treatment. I felt very energetic, very light on my feet and felt like I could run and jump. I was soon able to carry my 4-year old grandchild again. I was able to go for walks without hip pain and stiffness. The swelling in my leg went down significantly. I was able to stand again and sit without pain going down my leg. I no longer limp. I began sleeping better at night. I am very happy with the treatment and would highly recommend it.”
