

# WJ-PURE+

WJ-PURE+ is a minimally manipulated DSMO free Wharton's Jelly product for homologous use in clinical settings. Manufactured from bio-ethically donated umbilical cords from healthy births . Our proprietary process is absent of harmful enzymes and chemicals to preserve structural integrity and potency. WJ-PURE+ is rich in Medicinal Signaling Cells (MSC's), cytokines, growth factors, natural nano-particles, and proteins.

WJ-PURE+ 1ml

## REGULATIONS

---

Vitti Labs' WJ-PURE+ contains live cells but does not claim that it is dependent on the metabolic activity of living cells for its primary function. WJ-PURE+ contains tissue components such as hyaluronan, elastin, collagen fibers, growth factors, cytokines, and nanoparticles which stimulate cushioning agents, therefore, it is not reliant on the presence nor on the metabolism of the cells in this allograft to create a therapeutic benefit. WJ-PURE+ does meet the criteria under 1271.3(d) as an HCT/P, and therefore is regulated under 21 CFR 1271 and Section 361 of the PHS Act.

Vitti Labs is an FDA registered tissue bank. We comply with FDA (Federal Drug Administration) regulations. Additionally, we implement AATB (American Association of Tissue Banking) standards, follow GTP (Good Tissue Practices), GMP (Good Manufacturing Guidelines), and WHO (World Health Organization) protocols and procedures.
